

# PAPER PLANES PENGUINS & NORTH WIND

## GETTING STARTED

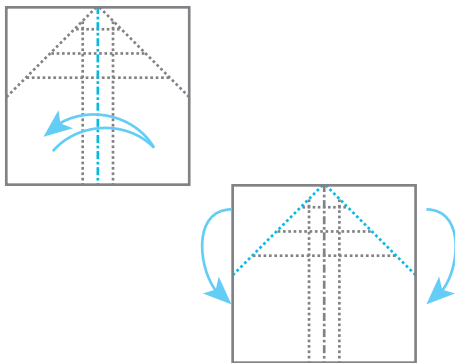

- Cut solid lines and fold dotted lines.
- Fold all pieces upward or downward along score lines.

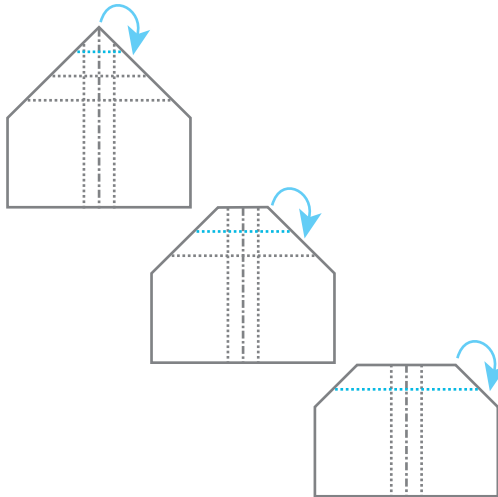

## INSTRUCTIONS

### NORTH WIND PAPER PLANE

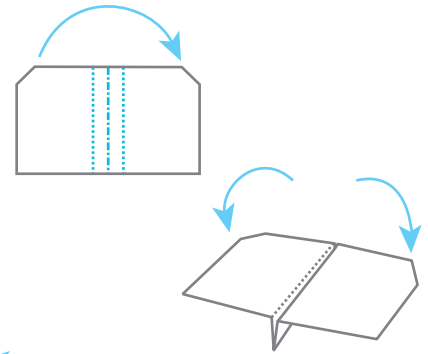

- 1 Cut out rectangle along outer solid line and crease center line and unfold. Mountain fold corners back.

- 2 Mountain fold the nose of the plane starting with the top line, then continuing downward.

- 3 Valley fold plane along centerline and mountain fold open wings.

The plane is complete!

Start flying!

### SKIPPER'S FLIGHT SCHOOL

- 1 Adjusting the Wings:

Keep the wings level when in flight and be sure that the front folds are properly creased to ensure symmetry.

- 2 How to Throw:

Because this design is wider than it is long, it will glide slowly. Release smoothly and horizontally, or slightly downward.

- 3 Flight Tips:

If the plane stalls, bend the rear wing edges downward to keep the nose down.

Keep body of plane straight and wings symmetrical to prevent unwanted turning. Even small differences make a difference because of the slow speed.
